TITLE: Combining digital image meta-data by  
storing  
meta-data self-describing attribute tags with one or more  
meta-data elements by describing action to be taken with  
element from similarly identified meta-data  
second image

----- KWIC -----

Basic Abstract Text - ABTX (1):

NOVELTY - The method involves storing self-describing  
attribute tags with  
one or more meta-data elements. Each such attribute  
describes the action to be  
taken with this meta-data element and a similarly identified  
meta-data element  
from a second digital-image is used when the two images  
are combined.

Basic Abstract Text - ABTX (3):

(a) an apparatus for combining digital image meta data by storing self-describing attribute tags with one or more meta-data elements

Basic Abstract Text - ABTX (4):

(b) a computer readable medium including a computer program for combining digital image meta data by storing self-describing attribute tags with one or more meta-data elements

Basic Abstract Text - ABTX (5):

USE - For combining a number of images and transforming an image having associated meta-data.

Basic Abstract Text - ABTX (6):

ADVANTAGE - Combines digital image meta-data by storing self-describing attribute tags with one or more meta-data elements. Each such attribute describes the action to be taken with this meta-data element and a similarly identified meta-data element from a second digital image when the two images are combined or transformed.

Basic Abstract Text - ABTX (7):

DESCRIPTION OF DRAWING(S) - The drawing shows a flowchart of a method for combining several images in accordance with the preferred embodiment of the invention.

Derwent Accession Number - NRAN (1):

2001-375079

Title - TIX (1):

Combining digital image meta-data by storing self-describing attribute tags with one or more meta-data elements by describing action to be taken with meta-data element and similarly identified meta-data element from second image

Standard Title Terms - TTX (1):
